

WMI16/20

Wall Microphone Input Unit

AUDAC

► Features

- Female XLR input connector
- Compatible with Niko, Legrand and bTicino installation materials
- Slim design
- Blends beautiful into walls
- Easy installation

► Applications

- Private houses
- Industrial buildings
- Offices

The WMI16/20 is AUDAC's flush mount Wall Microphone Input Unit.

It is especially designed to work in combination with AUDAC's M and R series amplifiers and WP18/28 wall panels. At the end of the datalink, the signals have to be converted by the APG20 module.

It is compatible with Audac, Niko, bTicino and standard U40 installation materials. And is available in black (/B) and white (/W).

The WMI16/20 creates an extra local microphone input in a separate zone.

It features a small internal amplifier to route the microphone signal to the amplifier without any interference or loss of quality.

The connections are made at the back of the WMI module with two RJ45 connectors. This makes it possible to connect with the APM20 and a potential linkthrough with an WLI or WP module.

The required power supply for operation is transmitted via the UTP cabling (24V), and the phantom power supply for the microphone (15V) is internally generated and can be disabled through the removal of 2 jumpers.

The construction is made of sturdy ABS and therefore suitable for big projects in industrial buildings as well as for standard installations into home design interiors.

There are two different AUDAC cover frames with metal subframe available, for 1 or 2 units. These are also available in black or white.

► Specifications

SYSTEM SPECIFICATIONS		
Digital control	RS485	
PRODUCT FEATURES		
Dimensions (Width x Height x Depth)	45 x 45 x 33 mm	WMI16
	43 x 43 x 33 mm	WMI20
